

Wet food located in cabinet under microwave. Oliver seems to like tiki mousse the best so I give him half one day and half the next. I don't put it in fridge, just in a baggie. If he doesn't eat it don't worry. He decides when and if he wants to eat wet food now since Maddie isn't here. Don't know why but he's a cat.

Put a generous handful of his dry in his bowl downstairs. Also located in cabinet under microwave. Do the same in his fish upstairs right inside doorway but don't spread it out evenly just pile it on. For some reason he doesn't like it spread out now lol. Don't ask me why he's gotta be different in two different places but he's changed a lot since Maddie passed.

Change water every visit downstairs across from food and in master by bathroom door.

Leave downstairs door curtain open a bit. He likes to look out.

Watering can is on back deck to right of door. Please only use garage or front door, not back slider to enter and exit. Little garden is behind the back deck and water will go right thru the mesh. Yellow hanging flower in front and got pink flower at bottom of drive need watered also. Only if there's been no rain. Prob only would need it Fri and Sat.

Next door neighbor is Dick and next to him is Judy and Phillip if anything happens and you need help.
